Lecture 10
Project Communications Management
Importance of Good Communications

- The greatest threat to many projects is a failure to communicate.
- Our culture does not portray IT professionals as being good communicators.
- Research shows that IT professionals must be able to communicate effectively to succeed in their positions.
- Strong verbal skills are a key factor in career advancement for IT professionals.
Project Planning & Management

Project Communications Management Processes

- **Communications planning**: Determining the information and communications needs of the stakeholders.

- **Information distribution**: Making needed information available to project stakeholders in a timely manner.

- **Performance reporting**: Collecting and disseminating performance information, including status reports, progress measurement, and forecasting.

- **Managing stakeholders**: Managing communications to satisfy the needs and expectations of project stakeholders and to resolve issues.
Communications Planning

- Every project should include some type of *communications management* plan, a document that guides project communications.

- Creating a stakeholder analysis for project communications also aids in communications planning.
Communication Techniques

• Formal, Impersonal approaches
  – project documents
  – deliverables
  – memos
  – change requests
  – project schedules
  – data dictionaries
  – error tracking procedures

• Formal, Interpersonal approaches
  – status review meetings
  – design review meetings
  – code inspections

• Informal, Interpersonal approaches
  – group meetings for information dissemination and problem solving

• E-communication
  – E-mail
  – E-bulletin boards
  – Web sites

• Interpersonal Network
  – informal discussion with those outside the project
Communications Management Plan Contents

- Stakeholder communications requirements.

- Information to be communicated, including format, content, and level of detail.

- The people who will receive the information and who will produce it.

- Suggested methods or technologies for conveying the information.
Communications Management Plan Contents (cont’d)

- Frequency of communication.
- Escalation procedures for resolving issues.
- Revision procedures for updating the communications management plan.
- A glossary of common terminology.
# Table 10-1. Sample Stakeholder Analysis for Project Communications

<table>
<thead>
<tr>

<td>Najwa Gates</td>
<td>6/1/2006</td>
</tr>
</tbody>
</table>

Comments: Put the titles and dates of documents in e-mail headings and have recipients acknowledge receipt.
Information Distribution

- Getting the right information to the right people at the right time and in a useful format is just as important as developing the information in the first place.

- Important considerations include:
  - Using technology to enhance information distribution.
  - Formal and informal methods for distributing information.
Distributing Information in an Effective and Timely Manner

- Don’t bury crucial information.
- Don’t be afraid to report bad information.
- Oral communication via meetings and informal talks helps bring important information—good and bad—out into the open.
Importance of Face-to-Face Communication

- Research says that in a face-to-face interaction:
  - 58 percent of communication is through body language.
  - 35 percent of communication is through how the words are said.
  - 7 percent of communication is through the content or words that are spoken.
- Pay attention to more than just the actual words someone is saying.
- A person’s tone of voice and body language say a lot about how he or she really feels.
Encouraging More Face-to-Face Interactions

- Short, frequent meetings are often very effective in IT projects.

- Stand-up meetings force people to focus on what they really need to communicate.

- Some companies have policies preventing the use of e-mail between certain hours or even entire days of the week.
## Table 10-2. Media Choice Table

<tr>
<td>Addressing many people</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

*Depends on system functionality*
Understanding Group and Individual Communication Needs

- People are not interchangeable parts.

- As illustrated in Brooks’ book *The Mythical Man-Month*, you cannot assume that a task originally scheduled to take two months of one person’s time can be done in one month by two people.

- Nine women cannot produce a baby in one month!
Personal Preferences Affect Communication Needs

- Introverts like more private communications, while extroverts like to discuss things in public.
- Intuitive people like to understand the big picture, while sensing people need step-by-step details.
- Thinkers want to know the logic behind decisions, while feeling people want to know how something affects them personally.
- Judging people are driven to meet deadlines while perceiving people need more help in developing and following plans.
Other Communication Considerations

- Rarely does the receiver interpret a message exactly as the sender intended.

- Geographic location and cultural background affect the complexity of project communications.
  - Different working hours
  - Language barriers
  - Different cultural norms
Determining the Number of Communications Channels

- As the number of people involved increases, the complexity of communications increases because there are more communications channels or pathways through which people can communicate.

- Number of communications channels = \( \frac{n(n-1)}{2} \)

where \( n \) is the number of people involved.
Figure 10-1. The Impact of the Number of People on Communications Channels

The number of communications channels can be calculated using the formula:

\[ \text{number of communications channels} = \frac{n(n-1)}{2} \]

- 2 people, 1 communications channel
- 3 people, 3 communications channels
- 4 people, 6 communications channels, etc.
Performance Reporting

- Performance reporting keeps stakeholders informed about how resources are being used to achieve project objectives.
  - **Status reports** describe where the project stands at a specific point in time.
  - **Progress reports** describe what the project team has accomplished during a certain period of time.
  - **Forecasts** predict future project status and progress based on past information and trends.
Managing Stakeholders

- Project managers must understand and work with various stakeholders.

- Need to devise a way to identify and resolve issues.

- Two important tools include:
  - Expectations management matrix
  - Issue log
<table>
<thead>
<tr>
<th>Measure of Success</th>
<th>Priority</th>
<th>Expectations</th>
<th>Guidelines</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scope</td>
<td>2</td>
<td>The scope statement clearly defines mandatory requirements and optional</td>
<td>Focus on meeting mandatory requirements before considering optional ones.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>requirements.</td>
<td></td>
</tr>
<tr>
<td>Time</td>
<td>1</td>
<td>There is no give in the project completion date. Every major deadline must</td>
<td>The project sponsor and program manager must be alerted if there are any</td>
</tr>
<tr>
<td></td>
<td></td>
<td>be met, and the schedule is very realistic.</td>
<td>issues that might affect meeting schedule goals.</td>
</tr>
<tr>
<td>Cost</td>
<td>3</td>
<td>This project is crucial to the organization. If you can clearly justify the</td>
<td>There are strict rules for project expenditures and escalation procedures.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>need for more funds, they can be made available.</td>
<td>Cost is very important, but it takes a back seat to meeting schedule and</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>then scope goals.</td>
</tr>
<tr>
<td>Etc.</td>
<td></td>
<td></td>
<td></td>
</tr>

<td></td>
</tr>
</tbody>
</table>
Suggestions for Improving Project Communications

- Manage conflicts effectively.
- Develop better communication skills.
- Run effective meetings.
- Use e-mail effectively.
- Use templates for project communications.
Project Planning & Management

Conflict Handling Modes

1. **Confrontation**: Directly face a conflict using a problem-solving approach.

2. **Compromise**: Use a give-and-take approach.

3. **Smoothing**: De-emphasize areas of difference and emphasize areas of agreement.

4. **Forcing**: The win-lose approach.

5. **Withdrawal**: Retreat or withdraw from an actual or potential disagreement.
Conflict Can Be Good

- Conflict often produces important results, such as new ideas, better alternatives, and motivation to work harder and more collaboratively.

- **Groupthink**: Conformance to the values or ethical standards of a group. Groupthink can develop if there are no conflicting viewpoints.

- Research suggests that task-related conflict often improves team performance, but emotional conflict often depresses team performance.
Developing Better Communication Skills

- Companies and formal degree programs for IT professionals often neglect the importance of speaking, writing, and listening skills.

- As organizations become more global, they realize they must invest in ways to improve communication with people from different countries and cultures.

- It takes leadership to improve communication.
Running Effective Meetings

- Determine if a meeting can be avoided.
- Define the purpose and intended outcome of the meeting.
- Determine who should attend the meeting.
- Provide an agenda to participants before the meeting.
- Prepare handouts and visual aids, and make logistical arrangements ahead of time.
- Run the meeting professionally.
- Build relationships.
Using E-Mail Effectively

- Make sure that e-mail is an appropriate medium for what you want to communicate.

- Be sure to send the e-mail to the right people.

- Use meaningful subject lines.

- Limit the content to one main subject, and be as clear and concise as possible.
Using E-Mail Effectively (cont’d)

- Limit the number and size of attachments.
- Delete e-mail you don’t need, and don’t open e-mail if you question the source.
- Make sure your virus software is current.
- Respond to and file e-mails quickly.
- Learn how to use important features.
Using Templates for Project Communications

- Many technical people are afraid to ask for help.

- Providing examples and templates for project communications saves time and money.

- Organizations can develop their own templates, use some provided by outside organizations, or use samples from textbooks.

- Recall that research shows that companies that excel in project management make effective use of templates.
### Project X Description

**Objective:** Describe the objective of the project in one or two sentences. Focus on the business benefits of doing the project.

**Scope:** Briefly describe the scope of the project. What business functions are involved, and what are the main products the project will produce?

**Assumptions:** Summarize the most critical assumptions for the project.

**Cost:** Provide the total estimated cost of the project. If desired, list the total cost each year.

**Schedule:** Provide summary information from the project’s Gantt chart, as shown. Focus on summary tasks and milestones.

<table>
<thead>
<tr>
<th>Task Name</th>
<th>August</th>
<th>September</th>
<th>October</th>
<th>November</th>
<th>December</th>
<th>January</th>

<td>IX.</td>
<td>Lessons-learned reports</td>
</tr>
<tr>
<td>X.</td>
<td>Copies of all status reports, meeting minutes, change notices, and other written and electronic communications</td>
</tr>
</tbody>
</table>
Lessons Learned Reports

- The project manager and project team members should each prepare a lessons-learned report.
  - A reflective statement that documents important things an individual learned from working on the project.
- The project manager often combines information from all of the lessons-learned reports into a project summary report.
Many project teams create a project Web site to store important product documents and other information.

Can create the site using various types of software.
Figure 10-3: Sample Project Web Site

Tempting Templates Project Web Site

**Background:** This project was done in the spring 2003 semester by a group of four Unite students at the University of Minnesota as part of their project management course, IE5541.

**Project Objectives:** Perform a search for document templates and example documents used in project management. Evaluate, categorize and document the search results to be used in writing the Information Technology Project Management, Third Edition, by Kathy Schwalbe.
Developing a Communications Infrastructure

- A communications infrastructure is a set of tools, techniques, and principles that provide a foundation for the effective transfer of information.
  - Tools include e-mail, project management software, groupware, fax machines, telephones, teleconferencing systems, document management systems, and word processors.
  - Techniques include reporting guidelines and templates, meeting ground rules and procedures, decision-making processes, problem-solving approaches, and conflict resolution and negotiation techniques.
  - Principles include using open dialog and an agreed upon work ethic.
Using Software to Assist in Project Communications

- There are many software tools to aid in project communications.

- Today more than 37 percent of people telecommute or work remotely at least part-time.

- Project management software includes new capabilities to enhance virtual communications.

- New tools, such as instant messaging and blogs, can enhance project communications.
Project Planning & Management

</tr>
</tbody>
</table>

*Figure showing the matrix for communication and collaboration techniques based on time and location.*
Chapter Summary

- The goal of project communications management is to ensure timely and appropriate generation, collection, dissemination, storage, and disposition of project information.

- Main process include:
  - Communications planning
  - Information distribution
  - Performance reporting
  - Managing stakeholders
